REPORT
TO THE
HEALTH COMMITTEE
OF THE
BOROUGH OF LIVERPOOL,
ON THE
SEWERAGE, PAVING, CLEANSING,
AND OTHER WORKS,
UNDER THE
Sanitary Act, from 1856 to 1862 inclusive.

BY
JAMES NEWLANDS, C.E.,
BOROUGH ENGINEER,
Local Surveyor under the Sanitary Act.

ORDERED BY THE HEALTH COMMITTEE TO BE PRINTED.

LIVERPOOL:
HENRY GREENWOOD, PRINTER, 32, CASTLE STREET.
1863.

RA 272
L-5A 25
~~SECRET~~
PUBLIC
HEALTH
LIBRARY

Dr. William C. C. C. C.

TO THE
AMBASSADOR

TO THE

CHAIRMAN OF THE HEALTH COMMITTEE

OF THE

BOROUGH OF LIVERPOOL.

SIR,

I beg to lay before you a Report of the various Works in my department, done under the direction of the Health Committee during the last six years. For the sake of succinctness and facility of reference I have arranged the matters, where possible, in a tabular form, reserving remarks for such works only as by their magnitude, or the benefits derived from them, or by their being somewhat out of the common way, appear to claim particular notice.

SEWERAGE AND DRAINAGE.

The first statement in the series is a list of sewers constructed since February, 1856. The sewers are classified according to their dimensions, and the length and cost of each are given. In these six years the enormous length of 58 miles 796 $\frac{1}{4}$ yards of sewers has

been constructed at a cost of £127,153 19s. 2d. as shown in the following summary:—

LIVERPOOL.			KIRKDALE.			EVERTON.			
	Miles.	Yards.	Cost.	Miles.	Yards.	Cost.	Miles.	Yards.	Cost.
1856	2	7½	£3028 17 10		554	£451 10 6	2	13½	£2626 9 5
1857	2	668½	3981 3 11	1	1471½	2921 14 8	2	220½	2647 16 2

During the same period the Health Committee have constructed 30 miles 1,195½ yards of courts and passage drains, of 12 and 9 inches diameter, at a cost of £26,453 1s. 6d., as shewn in detail in Table No. 2.

The total length of sewer made since 1847 is 115 miles 774½ yards.

Among the more important sewerage works made or completed since 1856 I may particularize those following, viz. :—

1st. The great chain of outlet sewer along the inland boundary of the Borough. The southern portion of this, comprising the Dingle outlet, was begun on the 20th August, 1849, and was carried on as the necessity arose to its terminus in Kensington, at the end of Beech-street, which was reached in November, 1858. This division of the outlet sewer has a total length of 3 miles 237 yards. The area of land within the Borough which can be drained into it is 3,780,000 superficial yards, and, if it were deemed advisable, it would afford an outlet for the drainage of 7,000,000 yards beyond

the Borough. The sewer is for 4,925 yards of its length 6 feet high and 4 feet wide, and for the remainder of its length 5 feet by 3 feet; its average depth below the surface is 29 feet 10 inches, its greatest depth is 51 feet 5 inches. Its worst gradient is 1 in 360; its steepest gradient 1 in 11. The total cost of the work was £14,389 10s. 10d.; its cost per lineal yard £2 12s. 2d.

The northern division of the outlet begins at the Dock Works at the west end of Vulcan-street. The outlet through Vulcan-street was made by Lord Derby at his own cost in 1852. From the east end of Vulcan-street the sewer was continued by the Health Committee, through Bank-hall and the Dingle in Kirkdale eastwards, to the Borough Boundary in Walton-lane, thence nearly along the line of the boundary to the south end of Belmont-road, and thence to the south end of Shiel-road in Kensington, opposite the terminus of the southern division. This point was reached in July, 1862. This division of the sewer has a total length of 3 miles 834 $\frac{1}{2}$ yards; its drainage area within the Borough is 3,784,700 yards, and beyond the Borough 1,734,000 yards. The sewer for 4,472 yards of its length is 5 feet high and 3 feet wide; for 952 yards it is 3 feet 9 inches high and 2 feet 3 inches wide; and for the remaining 360 yards it is 3 feet high and 1 foot 10 inches wide; its average depth is 26 feet below the surface, its greatest depth 59 feet; its worst gradient is 1 in 480, its steepest gradient is 1 in 42. The total cost of this division was £12,036 5s. 10d., its average cost £2 1s. 7 $\frac{1}{4}$ d. per lineal yard.

2nd. The south relieving sewer for the Paradise-street district, a work most beneficial in its effects, was begun in July, 1857, and finished July, 1858. Its total length is 1,051 yards, it is 5 feet 6 inches high, and 4 feet wide; its average depth is 15 feet, its greatest depth 18 feet 9 inches; its lowest gradient 1 in 240, its steepest gradient 1 in 24. Although carried for a great part of its length along very narrow streets with high, old warehouses on both sides, and through bad ground, it was completed without accident and without the slightest damage to property. The total cost of this work was £2,798, its cost per lineal yard £2 13s. 2 $\frac{1}{2}$ d.

3rd. The relieving sewers for St. George's and Prince's Basins. The discharge of the sewage of the town into these Basins had long been complained of. It was animadverted on by Mr. Rennie, in

his Report on the Sewerage of Liverpool, so long ago as 1816, but no remedy for the evil was pointed out. The plan proposed in my Report of 1848 was approved of by the Health Committee, but many difficulties were encountered in carrying it out; the greatest being the want of an outlet on the Dock Estate. The work required to be a joint undertaking of the Health Committee and the Dock Board. After much negotiation the plans were referred to Mr. Hartley, who, in June, 1859, reported in favour of carrying out the work, verified the estimates, amounting to £12,540, and recommended the Dock Board to contribute towards the expense. The chief obstacle being thus happily removed, the work was begun in August, 1859. In July, 1861, the south division was completed, since which date no sewage has been discharged into St. George's Basin—a fact of which even those who daily cross the Ferry seem to be unaware, as the flowing of sewage into that Basin is still frequently pointed out in the newspapers as the monster nuisance of Liverpool.

This south relieving sewer is 3 feet 9 inches high, and 2 feet 3 inches wide, it is $638\frac{1}{3}$ yards long, its average depth below the surface 14 feet 8 inches, its greatest depth 17 feet 1 inch. Its gradient is the lowest of all the sewers, being 1 in 600. Its total cost was £2,233, its average cost per lineal yard £3 10s., nearly.

The north relieving sewer was begun in September, 1859, and finished in February, 1862. It is 5 feet high and 3 feet wide, and 2,650 yards long, its average depth is 20 feet 10 inches, its greatest depth is 29 feet, its lowest gradient is 1 in 300, its highest gradient 1 in 120. It cost altogether, with its branches connecting the old works, £10,158, or nearly £3 16s. 8d. per lineal yard. The estimated cost of both works, as has been stated, was £12,540, the actual cost was £12,381. Towards this amount the Dock Board paid £3,098.

The old connections with the Basins are still retained, and arranged to act as bye-washes for the new sewers in the event of an excessive rain fall.

4th. Netherfield-road North. This sewer is 3 feet 9 inches high, and 2 feet 3 inches wide, and 1,014 yards long. It is formed in solid rock; its average depth is 20 feet; its total cost was £1,417; its cost per yard £1 7s. 11d. It was begun February 16, 1857, and finished December 24, 1857.

5th. St. George's-hill, Everton-terrace, and Waterhouse-lane. This sewer is 641·1 yards long; its height is 3 feet, its width 1 foot 10 inches; it is formed in solid rock; its average depth is 17 feet 2 inches; it cost £966 5s. 1d., or £1 10s. 2d. per yard. These two sewers, Nos. 4 and 6, form part of the series of relieving sewers for Great Homer-street, afterwards mentioned.

6th. The great sewer first projected by Mr. Rennie in 1816, as a boundary sewer for the old Municipal Boundary, and subsequently constructed in a modified form by Mr. Foster, in 1830, commences at the Southern end of Crown-street and proceeds northwards to the shore at Beacon's-gutter, following the turns and bends of the boundary line in its course. It has various rates of inclination. At the time of its construction the western slopes of West Derby and Everton, then beyond the Borough, consisted chiefly of fields. These are now crowded with streets, whose sewers, throw the water rapidly into the main sewer, tending to gorge it at the turns.

In 1848 a series of relieving sewers for this district was projected. These sewers, with one exception, as I have mentioned above, have been constructed. This sewer, which is not executed, is the most important of the series. It was proposed to be carried northwards along the line of a projected street from Netherfield-road South to Kirkdale. At that time this street could have been made at a moderate cost, the land being almost unoccupied. Now this land is entirely covered by streets, and the projected street, and, consequently, the line of relieving sewer is impracticable, except at very great cost. Plans of other mode of relief were ordered; but in the meantime it was necessary to do something for the mitigation of the evil arising from the engorgement of the sewer. This it was considered might, to a great extent, be prevented, or at least the time of its duration shortened, and the evil arising from it lessened, by getting rid of the sharp or right-angled turns in the main sewer. The localities which suffered were those where the sewer running from east to west down the steep slopes changed its direction to north and south with a slackened gradient. For example, at the junction of Everton-brow, Fox-street, and Richmond-row, and the junction of Boundary-street with Beacon's-gutter and Great Howard-street. At these points new turns of large radius and increased

capacity were substituted for the old turns, with the desired result. The cost of these works was as follows:—

Two at Boundary-street	-	-	-	£833	5	11
One at Fox-street and Richmond-row				252	5	2

The plans of the substituted relieving sewer are now nearly completed, and will shortly be submitted to the Committee.

As connected with the sewers I may here notice a singular subterraneous work found in James-street. In ascertaining the exact depth of the old sewer in this street, with the view to obtain drainage for a sumph or well in the very deep cellars of the North and South Wales Bank, the workman came to a point where he plainly heard the sound of water dropping, not into the sewer but into some excavation below it. On trying this excavation with his probing iron, he found it to be very deep and nearly filled with mud. The existence of some subterraneous work was known of before, but no one was aware of its position or its exact dimensions. On opening the ground and clearing away the mud, a tunnel cut in the solid rock was discovered. It is about seven feet high and nine feet wide for about eighty yards westwards from Derby-square, and there its dimensions are 5 feet by 6½ feet; its sides are carefully dressed, but its roof is of ruder formation. It has a well-formed roadway at the bottom, with a channel sunk along its southern side to keep it dry. The roadway is 22 feet below the surface of the street. At the junction of the Back Goree with James-street the tunnel turns northwards. It is probable that this work connected the Old Castle ditch either with the Old Tower or with some defences on the shore, as at that point where it may be conjectured it joined the Castle ditch provision for a gate had been made.

This old defensive work has been made to serve a useful purpose, a proper sewer having been constructed along its bottom, at the cost of the North and South Wales Bank, for the drainage of the deep cellars referred to.

CHARGE FOR PERMISSION TO DRAIN PROPERTY LYING BEYOND THE BOROUGH INTO THE OUTLET SEWERS.—When the outlet sewers were approaching completion many persons possessing property on their margin, but outside the Borough, were desirous of obtaining the privilege of draining into them. The Act of Parliament recognizes the power of the Council to enter into arrangements for the drainage

of property beyond the Borough; it was only necessary, therefore, in the absence of power to rate such property, to fix a sum to be paid in advance as a composition for the rate. On mature consideration the following scale of charges was settled. It is calculated on the principle of the present value at 4 per cent. of the probable sewerage rate regarded as an annuity for twenty years. This, in fact, places the owner of land beyond the Borough in respect of drainage on the same footing as the rate-paying owner of land within the Borough. In addition to this composition, there is a frontage charge of 6s. per yard for all property situated on the line of sewer and draining directly into it.

GULLIES.—The total number of new gullies constructed in streets during the six years is 1558. In courts and passages 205.

The number of gullies which during the same period have been reconstructed or trapped is 2527.

In cleansing the sewers only 6353 loads of rubbish have been removed, and 2576 loads from the gullies.

Table No. 3 contains a statement of all the street houses, courts and passages, and houses in courts, drained from March, 1856, to December, 1862; and of which the following is an analysis:—

	LIVERPOOL.	KIRKDALE.	EVERTON.	WEST DERBY.	TOXTETH PARK.	TOTAL.
Street houses	7690	1471	6681	3121	4629	23599

	11395	1578	7226	3391	6360	29950

FLUSHING DRAINS AND WASHING PLACES OF DEPOSIT AFTER THE OPERATIONS OF THE NIGHTMEN.—The duty of washing courts, passages, and places of deposit after the emptying of middens, was imposed on the nightmen under their contract, but it never was efficiently performed, owing chiefly to the condition in the contract, which made it imperative to wash only when a public hydrant was within thirty yards of the place. This restriction left more than half of the places unwashed. It was proposed to remedy this by combining the operations of flushing drains and washing these places, and to appoint a sufficient number of men provided with proper hose and apparatus, to wash every place requiring it, however distant from the hydrant. These men, it was arranged, should commence washing after the nightmen at four in the morning, and finish that service at eight; then, after an hour's rest, they should resume work with the flushing apparatus, and continue from nine until one o'clock: eight hours being considered a sufficient day's work at this employment. During the currency of the contract it was arranged to charge the Contractors the same amount as they had paid in previous years. It was believed that the two operations of flushing the drains and washing after emptying middens would be more perfectly and economically done by a special staff under the control of your own Officers than when left to the Contractors. The arrangements were proposed to the Committee in July, 1861, but the new staff did not begin their operations until January, 1862. They have been thus twelve months at work, and only three complaints have been received in that time.

For their operations the Borough is divided into seven Districts, as follows:—

No. 1 District is bounded by Water-street and Dale-street on the south, Scotland-road and Byrom-street on the east, Burlington-street and Regent-street on the north, and on the west by the line of Docks.

No. 2 District includes the Township of Kirkdale and its boundary, which is the boundary of the Borough; it includes also portions of Everton and Liverpool. It is bounded on the south by Regent-street and Burlington-street, Collingwood-street and Roscommon-street, St. George's-hill and Mere-lane; on the west by the line of Docks.

No. 3 includes the remainder of Everton and a part of Liverpool. It is bounded on the south by Shaw's-brow, London-road, Moss-street, Greenside, and West Derby-road; on the east by Boundary-lane, Whitfield-road, and the Boundary of the Borough; on the north by Mere-lane, Church-street, St. George's-hill, Roscommon-street, and Collingwood-street; and on the west by Scotland-road and Byrom-street.

No. 4 is bounded on the south by Upper Parliament-street; on the east by Crown-street and Boundary-place; on the north by London-road; and on the west by Lime-street, Renshaw-street, Berry-street, and Gt. George-street.

No. 5 is bounded on the south by Parliament-street; on the east by Gt. George-street, Berry-street, Renshaw-street, and Lime-street; on the north by Shaw's-brow; and on the west by the line of Docks.

No. 6 is the extra-parochial place of Toxteth Park within the boundary of the Borough.

No. 7 is the portion of the Township of West Derby lying within the boundary of the Borough.

There are two Contractors for removing the nightsoil. One has Districts 1 to 5; the other has Districts 6 and 7.

The staff for washing and flushing consists of fourteen men and one foreman; there are thus two men to each district. One man in each district belongs to the original drain-flushing staff, and his companion is a workman belonging to the water-staff, conversant with the management of the plugs and hydrants.

All the men meet the foreman at the Waterworks Office in Hotham-street every morning at four o'clock, to receive instructions and a list of places required to be washed that morning. The list is supplied by the nightsoil contractors' foreman, and is previously entered in the District books, of which there are two for each district used alternately. The work is systematised as much as possible to avoid travelling over the same ground twice, a thing not easily done, however, as there are several gangs of nightmen in each district, each having a certain number of middens to empty, and all having to finish work at the same time, namely, seven o'clock in the morning.

This throws the work of washing later than was originally proposed, the men being seldom able to get it over by nine o'clock.

The apparatus they are provided with consists for each District of two 2-inch stand pipes, one adapted for a plug and the other for a hydrant; one set of turncock tools, namely, a key, bar, and spoon; one rod, with hose and box for tools; two buckets and one besom, one branch and coupling. Every morning, when the washing is finished, this apparatus is put up at the stations appointed for it, which are as follows:—

- District No. 1 at Bevington Bush Water Station.
 „ „ 2 at ditto ditto.
 „ „ 3 at Soho Water Station.
 „ „ 4 at Mr. Rose's Yard, Back Bedford-street.
 „ „ 5 at Mr. Ellison's Yard, Duncan-street.
 „ „ 6 at Water-street Water Station.
 „ „ 7 at Windsor Water Station.

After an hour's interval the men begin their work as a flushing staff. A special apparatus is provided for this service. It consists of one covered hand-cart, one 3-inch stand pipe adapted for a plug and one for a hydrant; one set of turncock tools, as before; three lengths of hose, each fifty feet; one length of hose, 25 feet; two hose keys, one flush-box key, one pick. Of this apparatus one set is kept at each of the District Stations, which are as follow:—

- No. 1. Bevington Bush Water Station.
 „ 2. Ditto ditto.
 „ 3. Soho Water Station.
 „ 4. Health Committee District Yard, Smithdown-lane.
 „ 5. Cornwallis-street Yard.
 „ 6. Water-street Water Station.
 „ 7. Windsor ditto.

The men, provided with their lists of places, meet at these stations and proceed to work, attending to special cases in the first instance. In long courts and passages the water is allowed to run through the hose for an hour; but the hose is during that time moved to different flush-pipes, or to the stand-pipes of the wet traps, and sometimes it is necessary to open the ground and break into the pipes.

A list of all drains flushed in each district is kept, and the time the water has been allowed to run through the hose as accurately noted as possible, to afford the Water Engineer some data on which he may estimate the quantity of water used each week.

The foreman's duty is to have the lists of places requiring washing ready in time, to see that the work is sufficiently done, and to keep the contractors' men to their proper hours of finishing the emptying of the middens. When the flushing is proceeding he sees that the special cases are duly attended to, and that the proper rotation is observed as prescribed in the lists. He makes a return every day at twelve o'clock to the Engineer's Office, Cornwallis-street, of all drains which he finds choked; of all flush-pipes which he finds stopped or requiring repairs or renewing; and of places requiring additional flush-pipes. He then receives from the Drainage Superintendent the list of special cases, stating the time at which the flushing apparatus will be required, as for instance, where the ground has to be first opened and the pipe entered. He keeps the time-books of the men; one for the seven men belonging to the Water Staff, and one for the other seven men belonging to the Health Committee. These books are given in on Thursday morning at the offices of the Water Engineer and Borough Engineer respectively.

I have already stated that only three complaints of places not having been washed have been made in twelve months, which considering the number of operations every morning, afford no very great evidence of neglect or inattention.

The following is a statement of the average number of places washed daily during the past year:—

District No. 1, average per day,	33.	} This district is thickly inhabited.
„ 2, „ „	26.	
„ 3, „ „	24.	} This is not quite so populous.
„ 4, „ „	21.	
„ 5, „ „	21.	} This is still less so.
„ 6, „ „	21.	
„ 7, „ „	11.	} In these three districts the places lie still wider apart than in No. 3.
		} The inhabitants are widely scattered.

Although the numbers of places vary so much, the average distance travelled over in each district by the men is nearly the same. From actual measurement this is found to be five

miles, not including the going to or returning from the stations with the apparatus.

The average number of drains in courts and passages flushed every month, in each district during the past year, is as follows:—

District No. 1, average per month	-	-	-	82
" 2, " "	-	-	-	58
" 3, " "	-	-	-	73
" 4, " "	-	-	-	92
" 5, " "	-	-	-	87
" 6, " "	-	-	-	97
" 7, " "	-	-	-	97

EXTENT AND COST OF PAVING AND OTHER STREET WORKS.

The next statement (Table No. 4) shews in detail the streets in which square sets have been substituted for Macadam or boulder paving, or *vice versa*. The list of those which are now paved with square sets and channel stones comprises some of the worst streets in the lowest neighbourhoods in Liverpool. The Committee having now given their steady adherence to the doctrine that, for the sake of health and cleanliness, it is true economy to pave the worst streets in the best manner. The fact can never be too forcibly urged that, in a great commercial town like Liverpool, if attention is paid to the back streets, the great thoroughfares can always look after themselves.

The following is a summary of the work:—

	LIVERPOOL.	KIRKDALE and EVERTON.	WEST DERBY.	TOXTETH PARK.	TOTAL.
	Supl. Yards.	Supl. Yards.	Supl. Yards.	Supl. Yards	Supl. Yards.
1. Square sets substituted for boulder paving - - -	223,583	25,248	4,133	40,268	293,232
2. Square sets substituted for Macadam - - - - -	24,257		1,764		26,021
3. Macadam substituted for square sets - - - - -	1,277				1,277
4. Macadam substituted for boulders - - - - -	10,608	12,076	912	2,422	26,018
5. Caithness, Irish and Welsh flags substituted for Yorkshire - - - - -	10,732	558			11,290
6. Caithness flags substituted for boulders, cinders, &c.	1,050	1,016	2,057		4,123

10. Gullies reconstructed or trapped - - - - -	1,827	407	126	167	2,527

In the beginning of 1862 there was great distress among the labouring poor, which the parochial authorities endeavoured to relieve by employing the men in navigators' work, in the formation of Rake-lane, Kirkdale, and North-street, Toxteth Park.

The work was set out and superintended by your officers; but the labouring gangs were under the management of the parish officers, and were paid by the Parish. The Health Committee supplied tools; having on hand the greater part of the stock provided under similar circumstances of distress the previous winter as hereafter detailed. The experiment was eminently unsuccessful; the men were unskilled, and by previous habits or want of strength were quite unfit for the work. The labourers at North-street did more work than those at Park-lane, and I therefore give the detail of the former in illustration of the failure of the experiment.

There were 53 men employed for 86 days at 1s. 6d. a day = £341 17s.

They excavated 1,690 yards of stuff and removed it by wheelbarrow to a distance of 100 yards, and they in addition broke 80 cubic yards of stone for Macadam.

Allowing the usual price for the Macadam, the cost of the earth-work was 4s. per cubic yard.

The men worked from the 1st March to the 14th June, and our own men completed the work; excavating and removing in the same way 2,480 cubic yards of material, at a cost of £103 6s. 8d. or 10d. per yard, being little more than a-fifth part of the cost of the unskilled labour.

After this, recourse was had to the usual labour-test of stone-breaking—which I only mention here because of the wretched state of the Macadam roads which resulted from it. The material was of excellent quality, but badly broken; and when it is considered that the material costs above 6s. per ton, and the labour only 1s. 6d. per ton—that an unskilful breaker makes a great deal of waste—that the broken stones in place of being nearly cubes of equal size, are of all sizes and shapes, which tumble about on the road and are soon ground to powder—it will, I think, be agreed that some other test should be devised. By the present one the material is wasted, the roads are injured, and, which is probably the worst feature of the case, the poor labourer does not earn enough to keep him fit for his work.

NEW STREETS.—The next statement (Table No. 5) is a list of the new streets in the Borough, paved with a view to adoption by contract under the Health Committee, from 1856 to 1862 inclusive. The total number of streets is 218, the aggregate length of which is 16 miles 334 yards.

Table No. 6 contains a list of streets paved with a view to adoption by the workmen of the Health Committee. The number of streets is nine ; their aggregate length 1016 yards.

LEVELS OF STREETS.—The list next following, Table No. 7, is of levels supplied for new streets, for the completion of streets partially built, or for the erection of houses in streets not quite completed, or for the re-erection of houses in old streets.

The number of times levels have been supplied in the same street is marked in each case.

STREET TRAMWAYS.—In 1860 many applications were made to the Committee by parties to be allowed to lay down iron rails in the street, at their own expense, and I was instructed to report on the subject. In order to form an opinion of the effect of railways in the public streets, it was necessary to seek for information from places where they had been in common use, and I accordingly obtained from America a mass of evidence conflicting in its details, but nevertheless establishing the following points :—1st. That even under monopoly and mis-management the railroad had been a boon to the community, especially to the humbler classes. 2nd. That it had organized and systematized traffic in the streets in which it had been introduced. 3rd. That on the other hand, the horse railroads interfered with the general traffic of the city, and were injurious to ordinary vehicles and attended with danger to life.

In all the railroads referred to in the evidence from America, and in those which the applicants intended to lay, the horse track forms a kind of trough in the street, and it is easy to see why the evils complained of must inevitably follow their introduction. If the gauge is so wide, which it is in most cases, that the wheels of a light vehicle can get entirely into the track, then in the attempt to leave the track when the vehicle is turned obliquely, one wheel must in endeavouring to get over the upstand of the rail thrust the other against the upstand of the opposite rail, and the vehicle must suffer a wrench in which it is not unlikely that its axle may be

either bent or broken. The risk of accident from this cause would of course be increased in the case of a four-wheeled vehicle. In crossing the rail obliquely, too, light vehicles are liable to be forced into the track: their only safety is to cross it at right angles.

I considered that if the horse track were raised instead of being depressed the liability to such accidents would be much diminished, the road would not so soon be put out of repair, and it would be drier and firmer.

I recommended also that in Macadamized roads the horse track should be paved with narrow sets, and that a line of stone blocks should be laid outside of each rail, with the double object in view of rendering the road firmer, and preventing the wearing down of the macadam into holes along the rails by the jumping of the crossing vehicles.

Then as to the point as to whether such tramways should be laid down by and at the expense of the applicants, I ventured to recommend that no concession should be made to any individual or company, but that if tramways were found to be good for the public, they should be laid and maintained by the public authorities at the public expense.

When the subject was under discussion by the Committee, permission was granted by the Road Trustees to lay a line of railroad from the Borough boundary to the Old Swan. A short experience proved that all the anticipated evils were realized; vehicles were injured, horses were lamed, and it became so great a nuisance that it had to be taken up.

Among the more important new streets and roads and improved roads and streets which have been completed are—

1. Stanley-road, within the Borough, 1496 yards long, 24 and 22 yards wide.
2. Commercial-road, from Sandhills-lane to Stanley-road, 597 yds.
3. Commercial-road, from Boundary-street to Sandhills-lane, 515 yards.

These two roads were made by and at the expense of the Earl of Derby.

4. Gore-street North, Great Mersey-street, and Back Great Mersey-street, improvement.

5. Improvement of Lime-street.

6. Improvement of Shaw's Brow.
7. „ of St. Luke's-place.
8. „ of Old Haymarket.
9. „ Crosshall-street.
10. „ Park-lane.
11. „ West Derby-road.

12. Shiel-road. This, although outside the Borough, was made under the direction of your officers. It is 1136 yards long and 20 yards wide. It was begun on the 13th September, 1861; it was sewered, the retaining walls built, and the road made and lighted by the 31st July, 1862. The road was formally opened on the 19th September of the same year.

HOARDS AND SCAFFOLDS.—I beg again to urge on the notice of the Committee the necessity for making some charge for licenses to erect hoards, scaffolds, and guy posts. I have no doubt that such a charge would tend to reduce the time during which these obstructions occupy the public ways, and would not be felt as a hardship by the builders. Details as to the benefit which has been experienced in London by a system of charges for hoards, &c., will be found at page 81 of my Report to the Health Committee of 1851; and also the details of the system of licensing and the charges then proposed.

BRIDGES.—In the great lines of thoroughfare in the north end of the town, Great Howard-street, Chisenhale-street, Athol-street, Boundary-street, and Sandhills-lane, the traffic was impeded by the contracted roadway of the bridges over the Leeds and Liverpool Canal. The Committee long ago turned their attention to the improvement of these bridges, and had many interviews with the Canal Committee with this object in view. At length an arrangement was come to by which the Health Committee undertook to improve the bridges, the Canal Company paying the sum of £1000 in respect of whatever responsibility attached to them. Athol-street Bridge had become unsafe and required early attention, and this and Great Howard-street and Boundary-street Bridges were selected as the first to be operated upon.

Oldhall-street Bridge, or rather, as it might be termed, Oldhall-street Canal Tunnel.—The work here consisted of the substitution of cast-iron girders for the old stone arch. There are 16 spandrel

girders, connected together by the road-plates which are bolted to them. The spandrels are flushed in with bituminous concrete forming the foundation for the paving. The use of cast-iron admitted of the summit of the bridge being lowered, and the inclination on each side, heretofore very steep, being made easier and more suitable for the heavy traffic. An addition of 10 feet, too, was made to the width of the carriageway, and the roadway of the bridge is now of the same width as that of the street.

The cost of this bridge was as follows:—

Mason work	-	-	-	-	-	£351	4	9
Iron work	-	-	-	-	-	349	1	6
Asphalte	-	-	-	-	-	64	10	6
Flags	-	-	-	-	-	19	14	8
Timber	-	-	-	-	-	10	3	7
Felt, lead, & plate with Corporation arms						6	15	3
Rebuilding walls	-	-	-	-	-	18	9	2
Total cost						-	-	£821 11 5

Athol-street Bridge, commonly called Leigh Bridge.—The removal of the old stone bridge was begun in May, 1860; and the new bridge was finished and opened for traffic in March, 1861.

The old bridge was in a dilapidated state. It was of stone, 23 feet span, and with a roadway 13 feet wide between the parapets. The new bridge is 51 feet span, and 51 feet wide between the parapets. It is a spandrel bridge formed of 13 cast-iron arched ribs, rising four feet from the springing line to the soffit. The ribs rest on and are keyed to cast-iron abutment plates, bedded in the imposts. The structure is united and stiffened by transverse tubes, through which pass strong tie-rods, as well as by the manner in which the road-plates are attached to the ribs. Provision is made in this and the other bridges for the gas and water mains, which are laid in tunnels under the footpaths, and can be reached by merely lifting a flag; whereas formerly, when they passed under the canal, it was necessary to run it dry when there was necessity for inspecting the pipes or of making repairs. The effect of the improvement of this bridge is manifested by the immensely increased traffic, and the improvement of the property in its vicinity. Land, which had long lain idle for want of proper access, is now covered with buildings.

The cost of the work was as follows:—

Mason work	-	-	-	-	-	£1411	12	6
Iron work	-	-	-	-	-	996	2	4
Asphalting	-	-	-	-	-	74	8	0
Flagging	-	-	-	-	-	41	10	6
Miscellaneous, including carving shields						13	0	0
Total cost	-	-	-	-	-	£2536	13	4

Boundary-street.—The old stone bridge here being in good condition was allowed to stand, and wings were added to it at each side to extend it to the required width.

These consist of seven spandrel girders of 34 feet span, three being placed on one side of the stone bridge, giving an additional width of roadway of 10 feet, and four on the other side, giving an additional width of 15 feet; thus widening the roadway from 33 to 58 feet.

The cost of this bridge was as under:—

Mason work	-	-	-	-	-	£1157	7	4
Iron work	-	-	-	-	-	804	14	4
Asphalting	-	-	-	-	-	36	8	6
Flagging	-	-	-	-	-	40	2	0
Shields and miscellaneous items	-	-	-	-	-	10	0	0
						£2048	12	2

The working drawings and specifications for Sandhills-lane Bridge are completed, and those for Chisenhale-street Bridge are in progress; the work may be proceeded with during the present year. The new bridge at Sandhills is very much required to permit the improvement of Sandhills-lane to be carried out.

The estimated cost of Chisenhale-street Bridge is £2500.

„ of Sandhills Bridge - - - 4000.

SCAVENGING.—The next statement (Table No. 8) shews the cost of scavenging the Borough in each year from 1856 to 1862 inclusive. The cost has steadily increased with the extension of the streets, which in these six years amounts to 16 miles 1350 yards.

The question as to the propriety of scavenging the streets by night has been considered by the Committee and settled in the negative, and therefore need not again be opened here. There is, however, in my opinion, room for improvement in the organization

of the scavenging staff, and the mode of carrying on the work applicable at least to narrow and densely peopled streets with many courts and passages entering from them.

In these places, it appears to me that, it would be an improvement to give a certain extent of street, with its courts and passages, to be kept clean by one man, letting him attend to it during the whole of the day, and holding him responsible for its perfect cleanliness at all times. This workman would also have the charge of the tank water closets subsequently mentioned.

The heaviest expense for scavenging was incurred in 1861. There was much snow and ice to be removed during that winter, and the ordinary scavenging force had to be temporarily increased. The severe weather also threw a great number of labouring men out of employment; and the Mayor and Chairman and Deputy-Chairman met together on the 29th December, 1860, to consider whether temporary employment could be afforded them in clearing away the snow and ice. The great obstacle to giving such employment on the instant, and on a scale sufficiently large, was the want of tools. This difficulty was overcome; and as many spades, picks, and shovels were got together that afternoon as would suffice for 400 men. I was, therefore, instructed to advertise that 2s. a day would be given on the Monday following to those who offered. On the same evening, however, the weather changed, and a heavy rainfall speedily cleared away the snow. As it appeared, too, on the following day as if the ordinary channels of employment would be again open, I was instructed to withhold the advertisement. On the following week

NOTE.—Comparison of the cost of cleaning different towns are of not much value unless the towns are nearly of the same extent, and are similarly circumstanced in respect of paving, efficiency of cleansing, &c.; but it may be interesting to give here the detail of the cleansing of Berlin in the year 1856, when the population (400,000) was nearly the same in number as that of Liverpool. The number of men estimated to be employed was 360, with 16 superintendents.

Estimated cost of labour.....	£7403-62		
Extra for Winter.....	2450-16		
Estimated cost of { Cartage.....		£9853-64	
{ Tools.....		2073-536	
Superintendence.....		750-0640	
Rent and miscellaneous expenses.....		613-952	
Amount expended beyond the estimates :-		2172-000	£15463-192
Tools.....		161-0176	
Clearing ice and snow.....		3144-332	
Cleaning public squares and corners.....		1621-760	4027-1096
Total actual expenditure... ..			£20390-3016

there were heavy falls of snow succeeded by frost, and the condition of these poor people was worse than before. At one period a repetition of the bread riots of 1855 was apprehended, without sufficient cause, as it appeared; but more serious alarm was caused by bands of men prowling about the outskirts of the town watching the departure of gentlemen from their residences, and then demanding food and money from the inmates. Under these circumstances the Mayor and the Chairman and Deputy-Chairman of the Health Committee instructed me at once to provide for the employment of as many men as should offer.

The Town Clerk immediately issued large placards, intimating that men would be employed the following morning on applying to the Surveyors at the district yards. On the morning of Friday, the 11th January, many men did apply, but nearly 300 would not accept the terms, and went away. Provision was made for the employment of 3000, but only 442 availed themselves of it. As the pinching of want was felt the numbers increased, and from the 11th to the 18th, when the number was at its greatest, there were at work as follows:—

January 11 - -	442½	January 16 - -	2527
„ 12 - -	1113½	„ 17 - -	3040
„ 14 - -	1379½	„ 18 - -	3063½
„ 15 - -	2118		

The immediate effect of this employment was to reduce the pressure on the parish and on all the benevolent funds throughout the town, to diminish solicitation of alms, and altogether to do away with any pretext for the half-coercive begging in the outskirts.

The whole of the men employed were paid at the close of each day. The Committee having regarded the work as a labour test merely, I was instructed to employ every adult who applied. Considered as productive labour, the public, doubtless, did not get value for the money spent. Many of the men were not accustomed to use the spade, many were too feeble to do serviceable work, and many were of the class who will not work. There was no properly organised system of superintendence, but as many of the regular workmen of the Committee as could be spared were appointed to act as superintendents. These men did their best at least to preserve order, if not to turn the work to useful account.

As a protection against imposition in paying the labourers, every one was compelled to hand in the implement used by him before receiving his money, and there is reason to believe that this precaution checked, if it did not altogether prevent, imposition.

One great drawback from the utility of the scheme was the want of carts and horses to remove the ice and snow when collected. The greatest number which could be obtained was $103\frac{1}{2}$ per diem over and above the usual supply. Hence the heaps of snow and dirt were gathered up only to be spread out and gathered again and again.

The Committee were aware of this; but appreciating the necessity for continuing the employment were satisfied that the best was done under the circumstances.

As the severity of the weather abated so did the necessity for this extraordinary relief. It was considered advisable to diminish gradually the numbers employed, and notice was accordingly posted to the effect that on and after Monday, the 21st, none but residents in the Borough would get work. The numbers from the 19th to the 25th were as follows:—

January 19 - -	2967	January 23 - -	985 $\frac{1}{2}$
„ 21 - -	1937 $\frac{1}{2}$	„ 24 - -	456
„ 22 - -	1492	„ 25 - -	240

The proceedings of the Committee, it is gratifying to know, gave general satisfaction to the inhabitants.

The following statement shows the number of men employed in each district of the Borough:—

JANUARY, 1861.	LIVERPOOL NORTH.	LIVERPOOL SOUTH.	KIRKDALE.	EVERTON.	WEST DERBY.	TOXTETH PARK.	TOTAL.
Friday, 11th - - -	128	125	22 $\frac{1}{2}$	37	41 $\frac{1}{2}$	88 $\frac{1}{2}$	442 $\frac{1}{2}$
Saturday, 12th - -	368 $\frac{1}{2}$	382	61 $\frac{1}{2}$	53	104	144 $\frac{1}{2}$	1113 $\frac{1}{2}$
Monday, 14th - - -	401	568 $\frac{1}{2}$	69 $\frac{1}{2}$	40	105 $\frac{1}{2}$	195	1379 $\frac{1}{2}$
Tuesday, 15th - - -	560	902	108 $\frac{1}{2}$	115 $\frac{1}{2}$	168 $\frac{1}{2}$	263 $\frac{1}{2}$	2118
Wednesday, 16th -	731 $\frac{1}{2}$	945	124	107	270 $\frac{1}{2}$	391	2527
Thursday, 17th - -	801	1327	149	129	237	397	3040
Friday, 18th - - -	893	1319	132	121	277 $\frac{1}{2}$	321	3063 $\frac{1}{2}$
Saturday, 19th - -	752	1302	128	137	295 $\frac{1}{2}$	352 $\frac{1}{2}$	2967
Monday, 21st - - -	499 $\frac{1}{2}$	849	95	87	167	240	1937 $\frac{1}{2}$
Tuesday, 22nd - - -	398 $\frac{1}{2}$	633	73 $\frac{1}{2}$	69 $\frac{1}{2}$	127 $\frac{1}{2}$	190	1492
Wednesday, 23rd -	266	419	45 $\frac{1}{2}$	47	82	126	985 $\frac{1}{2}$
Thursday, 24th - -	133	173	25	25	40	60	456
Friday, 25th - - -	65	95	12	13	20	35	240
Totals - - -	5987	9039 $\frac{1}{2}$	1086	981	1935 $\frac{1}{2}$	2704	21662

The cost of this extra work was as undernoted, viz. :—

Wages	-	-	-	-	-	£2184	10	0
Tools and brooms	-	-	-	-	-	241	17	0
Cartage	-	-	-	-	-	596	0	0
Petty expenses	-	-	-	-	-	3	0	0
Total	-	-	-	-	-	£3025	7	0

STREET WATERING.—The number of carts in efficient condition is fifty-five, and there is one which will not run over another year. I recommend that the number be increased to sixty after the ensuing year.

The number of loads of water distributed during the last six years is as follows :—

1857	-	-	-	-	-	45,434
1858	-	-	-	-	-	104,182
1859	-	-	-	-	-	132,346
1860	-	-	-	-	-	144,243
1861	-	-	-	-	-	84,331
1862	-	-	-	-	-	110,951

The statement (Table No. 9) shows the cost of the work in each of these six years for each district in the Borough. It will be seen that the cost of delivery per load varies from 3·08d. to 4·56d. The average cost is 3·72d., nearly 3¾d. per load. The cost is increased when there is a great number of half-days' hire of the horses.

HYDRANTS.—From February, 1856, to December, 1862, the number of hydrants erected in each district is as follows :—

Liverpool	-	-	-	-	-	50
Kirkdale	-	-	-	-	-	4
Everton	-	-	-	-	-	11
West Derby	-	-	-	-	-	7
Toxteth Park	-	-	-	-	-	9
Total	-	-	-	-	-	—81

URINALS.—The next statement (Table No. 10) shows in detail the situations in which urinals have been erected, and their kind and number, from which it appears that in the six years 102 urinals have been erected, with accommodation for 227 persons, and that ten other urinals had also been erected and subsequently removed, owing to the alterations of the adjoining property.

COURTS AND ALLEYS.—It will be seen by the return of the

Scavenging (Table 8) that the number of Inspectors of Scavengers was 11 until 1858. Towards the close of that year two extra Inspectors were appointed, with special duties. The following observations will shew the necessity for their appointment, and afford a clue to their duties.

There are in Liverpool many courts constructed on a good plan having back yards and conveniences to each house, and a passage between the back yards of the contiguous courts. These courts are commonly open at both ends, which gives a proper circulation of air, and, being flagged, they are easily kept clean. Such places, when they do not consist of more than six or eight houses, are, apart from the vital error of over-crowding, tolerably healthy, and are in general, inhabited by an industrious and cleanly description of tenants. Unfortunately, however, such are the exceptions. The majority of the courts in Liverpool is very different indeed. The houses are generally built back to back, one end of the court as a rule is closed either by houses, or, which is worse, by the privies and ashpits; or a worse state of things still, the privies and ashpits are placed at the entrance of the court, and the only air supplied to the inhabitants must pass over their foul contents. But even this miserable state of things can be outdone. There are courts, which, by a perverted ingenuity have been formed in the following manner:—An ordinary street house has had its lobby converted into a common passage leading to the back-yard. The passage is of course roofed over, and is, in fact, a tunnel from which the back room of the original house now converted into a separate dwelling has its entrance. The back yard has been filled with other houses in such manner as to have only the continuation of the tunnel for access, and from this little area of 3 feet wide the houses receive their supply of light and air. The passage is generally terminated by the privy and ashpit common to all the wretched dwellings, with its liquid filth oozing through their walls, and its pestiferous gases flowing into the windows of the two last houses. The structural evils of these miserable abodes are aggravated by the filthy habits of the occupants. "What is everybody's business is nobody's business," and so the duty of keeping the court and its conveniences clean is neglected. Even when the middens have been filled so as to overflow the court, no one cared to take the

trouble to apprise the officers of the Nuisance Department of the fact in order to their being emptied.

For this state of matters the owners of the property could not provide a remedy. They had no power to enforce cleanliness, Under the Sanitary Act, however, the Council possessed this power. and resolved to exert it. A special Sub-Committee was formed; bye-laws were framed, notices were printed and posted in every court and alley throughout the Borough, and two Inspectors were appointed to carry out the wishes of the Committee. The Inspectors began by arranging among the inhabitants of each court their turns of duty in cleansing it, and on failure or neglect they summoned the whole of the parties before the Magistrate. They had some little difficulty at the outset in identifying the people and the houses they occupied. The courts were not properly numbered; the houses in the courts were not numbered at all. This was promptly remedied.

A short experience proved that a great amount of good was done by this new staff at an inconsiderable cost, and the Committee resolved to increase it by giving each of the Inspectors an assistant.

To those not conversant with the subject, it may appear that the evils of this court and alley life are exaggerated in the foregoing statement, and that the means taken for their mitigation are excessive. But let any one glance at the analysis which follows this, and then take into consideration the facts as there set forth, and in complete detail in Table No. 11, that in the Borough there are 3173 courts containing 18,610 houses; that the average number of houses in a court is 5·86, and the average number of inhabitants to a house is a fraction more than six: and it will be found that upwards of a fifth part of the population of Liverpool is condemned to live in these morally and physically unwholesome dwellings.

In the analysis which follows, I have presented the most important facts contained in Table No. 11. The first column of each table of the analysis contains the number of courts which have the structural peculiarities noted in the columns which follow in succession. For example, the first horizontal line of the first table of the analysis will be read thus, viz.:—In the North division of the Parish of Liverpool, there are 673 courts which have entrances of

three feet wide and under. Of these entrances 526 are arched and 147 are open. Further, of these 673 courts, 447 are closed at the upper end, and 226 are open; 98 have their privies at the entrance, 97 at the side, 409 at the upper end, 52 at both the entrance and side or the end and side; 17 have water closets; none have separate yards. Continuing to read along the horizontal line we find that, of the 673 courts, 80 contain one house only, 179 contain two houses, 78 contain three houses, 152 contain four houses, 29 contain five houses, 82 contain six houses, 11 contain seven houses, 28 contain eight houses, 6 contain nine houses, 11 contain ten houses, 6 contain eleven houses, 7 contain twelve houses, and 4 contain thirteen houses.

In the second horizontal line we find 395 courts with entrances from three to four feet wide; 194 of the entrances are arched and 201 are open. The upper ends of the courts in 187 cases are closed, in 208 cases they are open. The privies of 101 of the courts are at the entrance, of 37 at the side, of 222 at the end, and of 25 at both side and entrance or end and entrance. Seven of the courts have water-closets; one has separate yards to the houses. Of the 395 courts 18 contain one house, 34 contain two houses, 25 contain three houses, and so on.

The notes at the foot of each table contain such additional particulars as could not well be included in the tabular form. Among others, the number of courts in each district in which the houses are built back to back, and the number in which there are passages between the blocks of houses, and also a digest of the remarks on the margin of Table No. 11.

In 115 of these Courts the houses are back to back.
 10 " " " have passages at the back.
 1 " " " abut on gardens behind.
 1 " " " abut on courts.
 2 " " " the water closet is in the cellar.
 2 " " " there is a division wall separating it from the Court in the adjoining street.
 1 " " " there is a division wall separating it from the Court in the adjoining street.

Whatever amount of success has attended the enforcement of cleanliness is due in a great measure to the periodical inspections of the Sub-Committee, a duty often disgusting, and always disagreeable, but attended with excellent results. These visits give the Inspectors an invaluable moral support, and show the people that the operation is one of sympathy and kindness, not of punishment.

The Bye-laws were passed by the Council on the 9th March, 1859, and are as follow:—

1. Whenever tenants or occupiers of several houses in courts, alleys, streets, and other places within the Borough have the right to use in common any middenstead or privy, the several persons having such right shall be and they are hereby required to keep the internal walls, floors, seats, and fittings of such middenstead or privy thoroughly clean, so that the same is not a nuisance or annoyance to any inhabitant of the said Borough.

2. That if any privy or middenstead so used in common, or the walls, floors, seats, or fittings thereof, or any of them, shall be in such a state or condition as to be a nuisance or annoyance to any inhabitant of the Borough for want of proper cleansing thereof, as aforesaid, then the persons having the use in common as aforesaid, shall severally be liable to a penalty not exceeding forty shillings, and a further penalty not exceeding five shillings for every day during which the same shall remain in such state or condition.

All the courts of the Borough have been periodically inspected, some more than once a day. The following is a return of the parties summoned for infraction of the Bye-laws from April, 1859, to 31st December, 1862, with the result:—

SUMMONED.	ACQUITTED.	FINED.										Warrants issued.	Paid.	Sent to gaol.	Left.
		1/-	2/-	2/6	3/6	4/-	5/-	5/6	9/6	14/6					
541	137	4	178	80	1	3	126	2	9	1	66	19	12	35	

The cost of the Staff from its appointment in 1858 to the 31st December, 1862, has been as follows:—

1858	-	-	-	-	£16	16	0
1859	-	-	-	-	124	16	0
1860	-	-	-	-	124	16	0
1861	-	-	-	-	219	0	0
1862	-	-	-	-	270	0	0
Total	-	-	-	-	£755	8	0

But although this new staff under the directions of the Committee have unquestionably done good, the real source of the evil is not reached by it. The middens still exist to pollute the air of the place.

In some of the courts, as the returns show, water closets have been substituted for the common privy; and, although in some instances with good effect, yet in the majority of cases, arising from abuse, from ignorance, or from intermittent or deficient supply of water, they have proved failures.

In my Report to the Health Committee in 1848 I advocated the introduction of water closets to courts and small dwellings, but remarked that the closet should be adapted to the place it is to occupy and to the habits of the users. I there described a kind of closet adapted for back yards, courts, and public necessaries. These have been largely introduced into public institutions, schools, &c., and an experience of their working of nearly sixteen years' duration warrants the conclusion that they admirably serve their purpose.

But in order that they may effectually do so, it is requisite, as stated in my report of 1848, that the control of them should not be left to the persons using them, but that they should be managed by servants of the Corporation.

With this view, I have at page 21, proposed an alteration in the organization of the scavenging staff, whereby this duty could be accomplished in combination with the scavengers ordinary work; securing economy in the use of the water and preventing injury to the apparatus, without entailing additional expense.

There is another point, too, on which some improved course of action is required. The flagging of courts and passages is laid and maintained by the owner or owners, but it often happens that the surface of a court gets out of order, particularly in courts occupied by oakum pickers and chip dealers, who use the flagged area as a workshop, and speedily contrive to break or displace the stones in cutting old ropes or in cleaving large billets of wood.

Now, the displaced or broken flags too frequently have a most prejudicial effect on the health of the inhabitants directly by forming pools of filth, and indirectly by so disarranging the surface that the liquids cannot find their way into the drains, and the whole place becomes filthy. So long as the process of repair has to be

effected by serving notice on the owners—and there are many owners in a court—and so long as property changes hands in these places as frequently as at present, we must expect a continuance of the evils arising from broken and disarranged flagging above spoken of. The remedy appears to be to regard these places as ordinary streets subject to repair by the authorities. They would then, after being put in perfect order by their owners, or by the Committee at the expense of the owners, be adopted and maintained as streets by the public.

The above remarks and suggestions as to the improvement of courts, apply only to such as are susceptible of improvement. An investigation of the Table No. 11, will show to the Committee that in very many cases demolition is the only cure.

The works which have been enumerated and described are comprehended in the ordinary duties of the staff of the Health Committee. But a great amount of work for other Committees of the Council has been done, some of which is here mentioned.

1. Plans for the various Improvement Committees, including one showing the projected Boulevards on a scale of six inches to the mile, and detailed reports and estimates to accompany the plans.

2. Detailed survey for the Parliamentary plans of the improvement in Dale-street.

3. Detailed plans and models of the projected improvement of the approaches to the Landing Stages.

4. Report to the Special Improvement Committee by the Borough Engineer in April, 1859, accompanied by plans and documents, and the detailed survey for the Parliamentary plans of the improvements recommended by that Committee for Session 1860.

5. Report on Tramways, with plans, estimates, and models.

6. Plans for the proposed Public Offices.

7. Various plans for the Baths Committee. 1. For Bath at Old Reservoir, Everton Valley. 2. For Baths at Margaret-street, including working drawings, specifications, &c. These Baths are now in process of erection.

8. For the Watch Committee. 1. The usual work of inspector of lighting, including reports on application for lighting; also, for the lighting of new streets, all of which are accompanied by plans. 2. Designs for large lamps for places of refuge. 3. Plans, specifica-

tions, &c., for fitting up testing-room and apparatus, and subsequently plans and specifications for the erection of an independent building for the accommodation of this branch of the public service.

In conclusion, I may be permitted to congratulate the Committee on the fact that, notwithstanding the enormous amount of work executed, the greater portion of which has interfered with private rights, no unfriendly feeling has been manifested by any of the parties affected; but, on the contrary, your operations have been rightly appreciated, and not a single claim for compensation has arisen either in respect of damage to property or injury to the person.

I have the honour to be, Sir,
Your most obedient Servant,
JAS. NEWLANDS,
BOROUGH ENGINEER.

*Liverpool Public Offices,
February, 1863.*

* These are all connected with the relieving sewers for George's basin. The cost, which is here stated per lineal yard of the main line of sewer, includes also the taking up the old sewers, making connections and branches for all the streets abutting on the main line, connecting private drains, and making overflows and gullies.
